## General Information

Journal references in Mathematical Reviews (MR) appear in the following form: *Rückschritte der Math.* (6) 5(56) (1960/61), no. 2, 18–33 (1962), where, after the abbreviated title, one has: (series number) volume number(volume number in first series, if given) (nominal date), issue number if given, first page–last page (imprint date). If only one date is given, it is the nominal date and follows the volume number. If no volume number is given, the year is used in its place. The symbol  $\star$  precedes the title of a book or other nonperiodical that is being reviewed as a whole. If an issue of a journal is to be reviewed as a whole (e.g., when it is a collection of articles dedicated to an individual) and an ad hoc title is devised for this purpose then this title appears in braces { }. Articles that have been accepted for publication in certain important journals are now reviewed in MR from the final manuscript. The symbol  $\circ$  at the end of a review denotes such an item.

References to reviews in Mathematical Reviews before Volume 20 (1959) are by volume and page number (e.g., MR 15, 122); from Volume 20 to Volume 58 (1979), by volume and review number (e.g., MR 20 #4185 or MR 23 #A513); from 1980 on, by issue and review number (e.g., MR 80a:46017). References to reviews in *Jahrbuch über die Fortschritte der Mathematik* and *Zentralblatt für Mathematik* are

by volume and page number for the period before 1972 (e.g., *Jbuch* 50, 173; *Zbl* 29, 323) and by volume and review number since 1972 (e.g., *Zbl* 218:46017). Reviews reprinted from *Applied Mechanics Reviews*, *Computing Reviews*, *Mathematics of Computation*, *Physics Abstracts*, *Referativnyi Zhurnal Matematika* (Mekhanika, etc.), or *Zentralblatt für Mathematik* are identified by AMR, CR, MC, PA, RZMat (RZMekh, etc.), or *Zbl*, respectively, in parentheses following the reviewer's name.

Authors' names are given as listed in the item being reviewed. In order to identify each author uniquely, MR has assigned to certain authors' names an identifying form of the name. Superscript numbers are used in identifying forms where necessary. The identifying form is added in brackets following the published name.

Most review headings include institution codes. An institution code, indicating the author's address as listed in the reviewed item, consists of two [or three] parts separated by hyphens (e.g., 1-MR [or F-LYON-P]); these parts designate the country, the university or institution [and the department]. The absence of a department code usually indicates Department of Mathematics. Institution codes are also used to indicate the reviewer location for some reviewers. A list of codes appears in the most recent Annual Index of Mathematical Reviews.

**Editorial Office:** MR is a publication of the American Mathematical Society; it is edited at the University of Michigan in Ann Arbor. All editorial correspondence should be addressed to Mathematical Reviews, 416 Fourth Street, PO Box 8604, Ann Arbor, MI 48107-8604, USA; it may also be sent electronically via Internet to [MATHREV@MATH.AMS.COM](mailto:MATHREV@MATH.AMS.COM) or by FAX to (313) 996-2916. All other correspondence should be addressed to the American Mathematical Society, PO Box 6248, Providence, RI 02940-6248, USA. Orders should be addressed to the American Mathematical Society, PO Box 1571, Annex Station, Providence, RI 02901-9930. All orders must be accompanied by payment.

**Subscription information:** Prices for MR for the year 1989, including the annual index, are \$3510 list, \$2808 institutional member, \$431 individual member (\$481 outside the US), \$291 reviewer (\$341 outside the US). Combination paper and microfiche subscriptions are \$4668 list, \$3735 institutional member. Nonindividual subscribers outside the United States and India must pay a postage surcharge of \$60; nonindividual subscribers in India must pay a postal surcharge of \$133. A late charge of \$200 will be billed for orders received from nonmembers after January 1, 1989.

**Back volumes information:** Back issues are available for all volumes of MR; information concerning their prices can be obtained from the American Mathematical Society, PO Box 6248, Providence, RI 02940-6248. Back volumes are also available in microform from University Microfilms International, 300 North Zeeb Road, Ann Arbor, MI 48106-1346.

**Cumulative indexes:** There are sets of cumulative author and subject indexes that cover the entire span of MR from 1940–1984.

There are several other services that are of interest to users of MR:

- Current Mathematical Publications (CMP) provides an early announcement of books, collections and research articles in the mathematical sciences, many of which will be reviewed in MR.

- MathSci is the electronic version of CMP and MR; it also contains additional listings of items in statistics and computer science. It is available online through several commercial vendors. MathSci tapes can also be leased by institutions for campus-wide use.

- MathSci Disc contains MR from 1985–1988 and approximately 70,000 items from CMP on a single compact disc (CD-ROM). It is ideal for conducting electronic searches of the literature.

- MathDoc is the document delivery service enabling researchers to obtain copies of most articles listed in CMP, MR or MathSci.

Further information about these services can be obtained by writing the Ann Arbor or Providence offices, or by consulting advertisements at the end of the monthly issues of MR.

Mathematical Reviews (USPS 333-940) is published monthly plus, in December, an annual author and subject index issue, by the American Mathematical Society, 201 Charles Street, Providence, RI 02904-2213. Second-class postage paid at Providence, RI, and additional mailing offices. Postmaster: Send address changes to Mathematical Reviews, American Mathematical Society, PO Box 6248, Providence, RI 02940-6248.

## PREFACE

This annual index of Mathematical Reviews (MR) is included with each subscription and is also available separately. It is also called Volume 21 of the Index of Mathematical Papers (IMP). Volumes 6-9 of IMP are the annual indexes of MR for the years 1974-77 and are available as a set. The 1978 annual index was the first to be included with each subscription. There are cumulative author indexes to MR that cover 1940-59 (Vols. 1-20), 1960-64 (Vols. 21-28) and 1965-72 (Vols. 29-44), subject indexes for 1940-58 (Vols. 1-19) and 1959-72 (Vols. 20-44), and author and subject indexes for 1973-79 (Vols. 45-58) and 1980-84.

The classification scheme used in the present index is the 1980 Mathematics Subject Classification (1985 Revision). A copy of the revised version is printed in the back of the subject portion of this index.

The entries in the author, key and subject indexes are comprised of all items reviewed in MR during a given year and some items which will not be reviewed by MR but which have appeared in Current Mathematical Publications (CMP). A star (★) preceding a title indicates a book, or other item that is not a periodical, which is reviewed as a whole.

### Author index; separate key index

The entries in the author and key indexes give full bibliographic information. These entries are accompanied by review numbers and classification numbers; secondary classification numbers are given in parentheses. Entries are listed alphabetically by author; entries having several authors are listed in full under each author. Surnames consisting of more than one part (e.g., de Branges, van der Corput) are listed under the first capital letter. Collections of papers, proceedings, bibliographies, tables, etc. that are edited rather than authored are listed in the key index by title and by "key entry". For example, the publication entitled *Contributions to General Algebra* is listed under Contributions to General Algebra and is also listed under Conference: Contributions to General Algebra and under the location of the meeting. Some monographic series (e.g., Amer. Math. Soc. Transl. (2)) have entries under the series title in this index.

### Arrangement of entries in the author and key indexes

For a given heading (i.e., the primary name of an author, or a title), full entries are listed in order of nominal publication dates; the cross-references are in MR number order after the full entries. The arrangement of each entry is the same as in the heading of its review in MR. The general form for entries is as follows:

*Books, Monographs.* (Coauthors {if necessary}) Title. (Language of original {if necessary}) [English translation of title {if necessary}] Miscellaneous information {edition, editors, translators, series, etc.}. Publisher, city, date. Pagination. (Reviewer's name) Review number Primary classification (Secondary classifications {if necessary}).

*Journal article.* (Coauthors {if necessary}) Title of article {in English translation if the original title is not in English}. (Language of original {if necessary}). Summaries in languages other than the original {if necessary} Journal abbreviation {including series number if necessary} volume number(volume number in first series {if given}) (nominal date), issue number {if necessary}, first page-last page (imprint date). (Reviewer's name) Review number Primary classification (Secondary classifications {if necessary}).

The first three digits of the review number of an item refer to the MR issue in which the review is published and the last five digits refer to its position within that issue. The first two digits after the colon are the general subject classification of the item.

The phrase "EA 89m" after an MR number indicates that an MR erratum or addendum to the review appears at the end of the 89m issue.

### Subject index

The entries in the subject index are arranged in classification order. For a given classification, all entries with that classification as a primary appear first, with authored entries appearing before unauthored entries. These are followed by entries with that classification as a secondary. Again, authored entries appear before unauthored entries. Each section under a given classification is arranged in alphabetical order. For each entry, the author(s), title, language, translated title {if necessary} and the review number {if present} appear at the first author only. The entries for subsequent authors are cross-references to the first author. Complete bibliographic information is available in the annual author and key indexes as well as in the MR review.

### Cross-references

There are four kinds of cross-references in these indexes:

*Name variations.* An author's primary name is the variation of the name that MR has chosen on the basis of frequency and currency of usage. Items by a given author are usually listed under the author's primary name. In the author index, cross-references to the primary form are given from sufficiently distinct alternative forms of the author's name that have been used in items reviewed.

*Authors in other capacities.* In the author index, the names of persons associated with an item in a capacity other than that of author (e.g., editor, translator, subject of a biography, etc.) are also listed. In the subject index, such names appear in parentheses. In both indexes these items occur only as cross-references to complete listings.

*Key entries.* Cross-references for such entries as bibliographies, obituaries and references to special events are made to the authors of the papers in which these items appear, e.g. Bibliography: Gauss, Carl Friedrich *See* Bühler, Walter K., 89h:01057.

*Unreviewed entries.* Some entries in these indexes have not been reviewed in MR (e.g., items that do not appear to be in final form, or that are at the fringes of MR's scope) although they have been listed in CMP. If an unreviewed item is part of a collection, it will have a cross-reference to the review number for that collection's table-of-contents review. Other unreviewed items are labeled (Not in MR).

### Transliteration

Since 1983, MR has used the Cyrillic transliteration in use by ANSI, LC, Zbl, ISI, and others. This is also the system used throughout this index for all items. A table listing the transliteration appears at the end of the author/key index.

### Names of Chinese authors

The name of a Chinese author appears in the index in Western form. For example, Hua Luo-geng will be listed as Hua, Luo Geng, as though the author's name were Luo Geng Hua. The pinyin transliteration is used for mainland Chinese authors and the Wade-Giles transliteration is used for Taiwanese authors.

In an undertaking of this size errors are inevitable, despite elaborate precautions and checks. The editors of Mathematical Reviews would be very glad to have their attention drawn to errors in this index and also in the earlier indexes.
